Information Technology

MODULE 1

Rana, Karan

CSIT_230,01SP21

Instructor: Dr. G.E. Antoniou

1. Problem 1

(40 pts) Binary to decimal ... and back (Need to show all steps)

(a) Convert the following unsigned binary number to decimal: $(111111)_2 = (?)_{10}$ $(111111)_2$

```
1*2^5 + 1*2^4 + 1*2^3 + 1*2^2 + 1*2^1 + 1*2^0
```

32+16+8+4+2+1

Answer: 63

(b) Convert the following unsigned binary number to decimal: $(0.11111111 \cdot \cdot \cdot 1)_2 = (?)_{10}$ $(0.1111111...1)_2$

```
1*2^0 + 1*2^-1 + 1*2^-2 + 1*2^-3 + 1*2^-4 + 1*2^-5 + 1*2^-6 + 1*2^-7

1*1 + 1*0.5 + 1*0.25 + 1*0.125 + 1*0.0625 + 1*0.03125 + 1*0.015625 + 1*0.00778125

Answer: 1.99215625....
```

(c) Convert the following decimal number to binary: (1111.111)10 = (?)2

```
(1111.111)2
```

Divide the number by 2 until 0 is the final remainder

```
1111.111/2 = 555.5555; 1

555.5555/2 = 277.7775; 0

277.7775/2 = 138.88875;0

138.88875/2 = 69.444375; 0

69.444375/2 = 34.7221875; 0

34.7221875/2 = 17.7221875; 0

17.7221875/2 = 8.680546875; 0

8.680546875/2 = 4.3402734375; 0

2.17013671875/2 = 0;
```

The Answer: 00000001

(d) Convert the following hexadecimal number to binary, then the binary to decimal: $(FFFF)_{16} = (?)_2 = (?)_{10}$

first we break down the digits

Module 1 Assessment 1

```
= 15*16^0 + 15 * 16^1 + 15* 16^2 + 15*16^3
= 15*1 + 15 * 16 + 15 * 256 + 15*4096
= 65535
```

The decimal Number is (65535)10

Long division for binary:

65535/2 = 32767 left over 1 32767/2 = 16383 left over 1 16383/2 = 8191 left over 1 8191/2 = 4095 left over 1 4095/2 = 2047 left over 1 2047/2 = 1023 left over 1 1023/2 = 511 left over 1 511/2 = 255 left over 1 255/2 = 127 left over 1127/2 = 63 left over 1 63/2 = 31 left over 131/2 = 15 left over 1 15/2 = 7 left over 17/2 = 3 left over 1 3/2 = 1 left over 1 ½ = 0 left over 1

Final Answer: 1111111111111111

2. Problem 2

(20 pts) Perform the following (subtraction) operation (Need to show all steps): • $(1-11)_{10}$ Using signed binary, 8-bit 2's complement arithmetic. $+1_{10}$ - 11_{10}

Find out the binary numbers

+1 = 1

-11 = - 1011

Subtraction:

1 - (-1011) = -1010

3. Problem 3

11.001* 2^1 =

```
(40 pts) 32-bit FPN (IEEE 754) to decimal and back (Need to show all steps)
            (a) Convert the following 32-bit FPN (IEEE 754) to decimal number:
                                       1 10000000 110010000000000000000000
                                      1 10000000 110010000000000000000000
                                      Positive Integer
                                      8 bits
                                      Fraction bits
                                       We can see the first number is 1 which is negative.
                                      The 8 bit conversion after the sign bit
                                      (10000000)2 -> 1*2^0 + 0*2^1 + 0*2^2 + 0*2^3 + 0*2^4 + 0*2^5 + 0*2^6 + 0*2^7 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6 + 0*2^6
            0*2^8
                                      1+0+0+0+0+0+0+0
                                      = 1
                                      Exp bias = 127
                                      E = 1-127 = -126
                                      M = 1*2^{-1} + 1*2^{-2} + 0*2^{-3} + 0*2^{-4} + 0*2^{-5}
                                      = 0.5 + 0.25 + 0.125 + 0.0625 + 0.03125
                                      = 0.96875
                                      (-1)^s (1+m) * 2^e = (-1)^0 * (1 + 0.96875) * 2*7
                                                                                                 = -1 * 1.96875 * 128
                                                                Answer = -252
            (b) Convert the following decimal number to 32-bit FPN (IEEE 754) number:
                                      (-3.125)_{10}
            3/2 = 1.5; remainder 1
            1.5/2 = 0.75; remainder 1
            = 11.001
            0.125 * 2 = 0.25; 0
            0.25 * 2 = 0.5;0
            0.5*2 = 1;1
```

Module 1 Assessment 1

First bit would be the sign bit, since its negative it would be 1

8 bits would be 127 + 1 = 128

128 converted to binary would be: 10000000

The final number would be 1 10000000 0011100000000
